                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     90
                                                                                                                                                                                                                                                                                                                                            The invention comprises a neuroregenerative drug that inhibits the activity of glycogen synthase kinase-3 (GSK-3). The neuroregenerative drug of the invention is useful for treating neurological disease, such as: Parkinson's disease, Alleimer's disease, Down's syndrome, cerebrovascular accident, stroke, spinal injury, Huntington's chorea, multiple sclerosis, amyotrophic lateral sclerosis, spilalipsyy, anxiety disorder, schizophrenia, depression and manic-depressive psychosis. The present human DNA sequence is used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GAGAAGAAGATGAGGTCTATCTTAATCTGGTGCTGGACTATGTTCCGGAAACAGTATAC 459
                                                                                                                                                                                                                                                                                                                                                   The invention relates to antisense compounds targetted to nucleic acid encoding glycogen synthase kinase 3-beta (GSKB) (also known as tau protein kinase I (TPK-I)). The antisense compound is useful for inhibiting the expression of glycogen synthase kinase 3-beta enzyme the enzyme such as insulin regulation disorder, in particular diabetes and neurological disorder, e.g. Alzheimer's disease and bipolar illness. The antisense compound is also useful for diagnosing diseases associated with the expression of glycogen synthase kinase 3-beta and for whith the expression of glycogen synthase kinase 3-beta and for prophylaxis e.g. to prevent or delay infection, inflammation or tumour formation and as a research reagent. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            90

                                                                                                                                                                                                                                                                        polynucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an sequences mentioned in the specification. The combination is useful as an cray element in a microarray for monitoring the expression of a number of target polynucleotides. The microarray is particularly useful in the diagnosis and treatment of cancer and immunopathology and neuropathology. The microarray is useful in diagnostics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, forensics and pharmacogenomics. The microarray is also useful for monitoring progression of diseases and for developing sophisticated combination is also useful for purifying a subpopulation of mRNAs, conditionance to endifferent signaling pathway populations which can be used to diagnose of and genomic fragments and in research and diagnostic applications. The various diseases including cancer e.g. adenocarcinoma and leukaemia, communopathies e.g. AIDS and astehma, neuropathies e.g. Alzheimer's disease and parkinson's disease. The present sequence represents a polynucleotide probable of the invention. Note: The sequence are for this patent did not form part of the printed specification but was obtained in electronic sequence in any answer and precipilation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 219
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     279
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           LeuValAlaileLysValysValLeuGlnAspLysArgPheLysAsnArgGluLeuGlnIle 110

The invention relates to novel Drosophila species DNA sequences and their encoded proteins with their corresponding human homologues. The proteins or their encoding polymuclectides are useful in a method of prevention, treatment or diagnosis of a disease in an individual, and used to identify a substance capable of binding to the polypeptide or modulating the polypeptide or modulating incubating the polypeptide. The compositions are administered to an individual in need of such treatment. The method of diagnosis, in which the presence or absence of a polymucleotide is detected in a biological sample, comprises brining the biological sample containing the nucleic acid such as DNA or concact with a probe comprising a fragment of at least 15 nucleotides of the polymucleotide, and detecting any duplex formed between the probe and nucleic acid in the sample. The method also comprises providing an antibody capable of binding to the polypeptide, incubating a biological sample with the antibody to allow the formation of an antibody-antigen complex, and determining whether antibody-antigen complex comprises such as cancer. The antibody to allow the formation of an antibody-antigen complex, and determining whether antibody-antigen complex compresses such as also useful in inhibiting the function. The diseases such as unclaimed a substance is also useful in inhibiting the function. The diseases such as substance is also useful in inhibiting the function. The diseases such as substance is also useful in inhibiting the function. The diseases such as substance is also useful in inhibiting the function. The diseases such as substance is also useful in inhibiting the function. The diseases such as substance is also useful in inhibiting the function. The diseases such as such as such as psoriasis, inflammatory diseases such as sequence represents a human homolog and an apportance of the processes of the inhibition of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New Drosophila polypeptides and polynucleotides, useful for diagnosing, preventing and/or treating disorders, such as cancer, glomerulonephritis, rheumatoid arthritis, psoriasis, malaria, emphysema and alopecia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of the Drosophila genes of the invention.
inflammatory disorder; malaria; emphysema; alopecia.

```
The invention relates to a composition of polynucleotide probes

comprising first polynucleotide probes comprising at least a portion of a

gene encoding an effector-like polypeptide, second polynucleotide probes

comprising at least a portion of a gene encoding a transducing

polypeptide and third polynucleotide probes comprising at least a portion

composition are useful as array elements in a microarray for monitoring

the expression of target polynucleotides. The microarray for monitoring

the expression of target polynucleotides. The microarray is useful in the

diagnosis and treatment of cancer, an immunopathology or a

neuropathology. It can also be used for drug discovery and development,

toxicological and carcinogenicity studies, forensics or pharmacogenomics.

Microarrays can also be used for monitoring the progression of diseases

that may be associated with the altered expression of signalling pathway

polypeptides. The composition can also be used to purify a subpopulation

con manaba, or genomic fragments in a sample. The expression profile

is also useful for the diseases or depression. This sequence represents a

confinency Alzheimer's disease or depression. This sequence represents a

culcerative colities, or a neuropathology, e.g. dementia, ammesia,

confinency and not form part of the printed specification but was

confinency and one of the invention of the sequence data for

contained in electronic formet directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                               Human, probe, 88, receptor-like polypaptide; transducing polypeptide; effector-like polypeptide, cancer; immunopathology; neuropathology; drug development; toxicology; carcinogenicity; signalling pathway polypeptide; adrenal gland; bladder; bone; bone marrow; brain; breast; cervix; tumour; immunopathology; AlDS; diabetes; pancreatitis; osteoporosis; ulcerative colitis; neuropathology; dementia; amnesia; epilepsy; Alzheimer's disease; depression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising polynucleotide probes, useful as array elements in a microarray for monitoring the expression of target polynucleotides or purifying a subpopulation of mRNAs, cDNA, or genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1389 BP; 402 A; 326 C; 326 G; 335 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 6; SEQ ID NO 1414; 73pp; English.

disorder associated with erythroid cells e.g. anaemia and erythrocytosis, bone marrow e.g. leukaemia, platelets e.g. thrombocytopenia and thrombosis or Barcells and T-cells e.g. neutropenia. The compounds identified may be utilised during gene therapy procedures. The current sequence is that of a human haematological disorder-related cDNA of the
                                                                                                                                                                                                                                                                                       SerGlyvalAspGlnLeuValGluIleIleLysValLeuGlyThrProThrArgGluGln

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel method for identifying a compound capable of treating a haematological disorder which comprises combining a compound to be tested with a specific polypeptide under conditions suitable for binding of the test compound to the polypeptide. The method of the invention has haematological and cytostatic applications and may be useful for identifying compounds for treating a haematological
                                                                                                                                                                                                                                                                                        B-cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying a compound capable of treating a hematological disorder comprises combining a compound to be tested with a polypeptide related with the disorder under conditions suitable for binding of the test compound to the polypeptide.

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox
                                                                                                                                                                                                                                                                                                                             Claim 44; SEQ ID NO 3932; 874pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GlnThrLeuProValI1eTyrValLysLeuTyrMetTyrGlnLeuPheArgSerLeuAla 180
                                                                                                                                                                                                                                                                                        The invention comprises oligomeric compounds which are targeted to a nucleic acid molecule encoding a bone growth modulator chosen from dicktopf-1 (DKK-1), glycogen synthase kinase 3-beta, (GSK3-beta), sfrizzled-related protein 1 (SFRP-1), sclerostin, transducer of ERRB1, and src-c. The oligomeric compound of the invention is capable of inhibiting the expression of the bone growth modulator. The oligomeric compound of the invention is useful for inhibiting the expression of a bone growth modulator in a biological fluid, cell or tissue. The oligomeric compound of the invention is further useful in the treatment of bipolar disorder, mania, Alzheimer's disease, diabetes, leukopenia, sclerosteosis, and hyperproliferative disorders. The present nucleic acid represents a rat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              229
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   349

AAQ67459 codes for a newly isolated tau-protein kinase I enzyme (TPK-1), shown in AAR61327 (compare to human AAR6136). The CDNA was cloned from a rat feeus brain cDNA library, and was expressed in insect cells. TPK-I acts specifically on tau-protein, which is thought to be involved in Alzheimer's disease (AD) and senile dementia of the AD type. It is hoped that the characterisation of TPK-I may lead to development of new agents for the prevention and therapy of these diseases. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PA field.)

The invention relates to a novel method for the phosphorylation of tau protein in which tau protein or its partial peptide is phosphorylated by the action of phosphoenzyme I, a serine-threonine phosphorylase. The method of the invention may be used for elucidation of the cause of Alzheimer's disease and Alzheimer type senile dementia. The current sequence is that of the rat tau phosphorylation-related CDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GTGCTGGACTATGTTCCGGAAACAGTGTACAGAGTCGCCAGACACTATAGTCGAGACAAG

The invention relates to a method of diagnosing (MI) a disease or disorder associated with aberrant glycogen synthase kinase-3beta (GSK-3beta) expression or activity, or a predisposition to the disease or disorder. by detecting marker within a GSK-3beta gene or its expression product that is associated with the disease or disorder in sample derived from a bubject, where detection is indicative of disease or disorder with the disease or disorder with the disease or disorder in a sample derived from a subject, where the categoric or disorder in a sample derived from a subject, where the categoric or disorder in a sample derived from a subject, where the categoric or disorder in the subject; identifying a marker within a GSK-3beta gene or disorder in the subject; identifying a marker within a GSK office or expression product that is associated with a marker is disorder that is associated with the marker; or determining a disease or disorder that is associated with the marker; or determining a disease or disorder that is associated with the marker; or determining a disease or disorder that is associated with the marker of single nuclectide polymorphism (SNP); chosen from a thymidine or cytosine at a position corresponding to nuclectide position or single nuclectide polymorphism (SNP); chosen from a thymidine at a position corresponding to nuclectide with aberrant glucose disorder, where the disease or disorder associated with aberrant glucose metabolism, stroke, stroke induced ischmia, muscle hypertrophy, cancer and their combinations. The disorder associated with aberrant glucose metabolism chosen from insulin resistance, type II aberrant glucose metabolism chosen from insulin resistance, type II disorder and their combinations. The disorder is a disorder represents the glycosen synthase kinase-3beta synthase combinations and their combinations of the present sequence represents the glycosen synthase kinase-3beta gSNL special control c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     293 TCAGCTTTTGGCAGCATGAAAGTTAGCAGAGACAAGGACGGCAGCAAGGTGACAACAGTG 352

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient
                             Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  445 GTGGCAACTCCTGGGCAGGGTCCAGACAGGCCACAAGAAGTCAGCTATACAGACACTAAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises oligomeric compounds which are targeted to a nucleic acid molecule encoding a bone growth modulator chosen from dickkopt. I (DKK.), glycogen synthase kinase 3-beta, (GSK3-beta), sfrizzled-related protein 1 (SFRP-1), sclerostin, transducer of BRRB1, and src.. The oligomeric compound of the invention is capable of inhibiting the expression of the bone growth modulator. The oligomeric compound of the invention is useful for inhibiting the expression of a bone growth modulator in a biological fluid, cell or tissue. The oligomeric compound of the invention is further useful in the treatment of bipolar disorder, mania, Alzheimer's disease, diabetes, leukopenia, sclerosteosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GCGGAGAGCTGCAAGCCAGTGCAGCCTTCAGCTTTTGGTAGCATGAAAGTTAGCAGA

The present sequence is that of cDNA encoding a constitutively active form of murine glycogen synthase kinase beta (GSK-1beta). GSK-1beta is a serine/threonine Kinase that may affect cellular processes including development, differentiation and proliferation. When dephosphorylated at Ser-9, the kinase activity of GSK-1beta is constitutively active. The invention relates to methods of altering cardiac-preferred expression in transgenic animals. An animal cell or animal is stably transformed with an expression cassettes comprising a cardiac-preferred promoter ADI28866 operably linked to a nucleotide sequence of interest, e.g. GSK-1beta. Expression cassettes, host cells and transgenic animals are provided. The transgenic animals may have an altered susceptibility to cardiopathology cardiopathology is especially a cardiomyopath such as familial hypertrophic cardiomyopathies, dilated cardiomyopathies, peripartum cardiomyopathy, restrictive cardiomyopathies, ischaemic heart disease, angina pectoris, myocardial infarction, hypertensive heart disease and endocarditis (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid molecule having inducible cardiac-preferred expression, useful for diagnosing or treating cardiac diseases, including ischemic heart disease, angina pectoris, myocardial infarction and

AAQ67458 codes for a newly isolated tau-protein kinase I enzyme (TPK-1), shown in AAR61326 (compare to rat AAR61327). The CDNA was cloned from a rat fetus brain cDNA library, and was expressed in insect cells. TPK-I acts specifically on tau-protein, which is thought to be involved in Alzheimer's disease (AD) and senile dementia of the AD type. It is hoped that the characterisation of TPK-I may lead to development of new agents for the prevention and therapy of these diseases. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             616 Argricaggecegecedagaaceaeereerringegaggereeaagecegergeageageer 675

Patent No. 6500938

GENERAL INFORMATION:
APPLICANT: Janice Au-Young
APPLICANT: Jeffrey J. Seilhamer
ITILE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
ITILE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEQUENCES: 1490
CORRESPONDENCE ADDRESS:
ADDRESSEE: INCYTE PHARMACEUTICALS, INC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1389

Patent No. 5837853

GENERAL INFORMATION:
TITLE OF INVENTION: PREVENTIVE OR THERAPEUTIC AGENTS FOR
TITLE OF INVENTION: ARZHEIMER'S DISEASE,
TITLE OF INVENTION: Lau-PROTEIN KINASE I ORIGINATED FROM HUMAN BEING (AS AMENDED)

NUMBER OF SEQUENCES: 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 ProGlnGluValSerTyrThrAspThrLysValIleGlyAsnGlySerPheGlyValVal 80

Sequence 2, Application US/08461018A
Patent No. 6071694
GENERAL INFORMATION:
APPLICANT: AAKINIKO TAKASHIMA et al.
TITLE OF INVENTION: SCREENING METHOD FOR THERAPEUTIC AGENTS AGAINST TITLE OF INVENTION: ALZHEIMER'S DISEASE (AS AMENDED)

US-08-461-018A-2
